

Laurel Bridge Enables Healthcare Providers to Manage Archive Migrations and Consolidations
Provides enterprises the flexibility and control to migrate legacy and other medical imaging data.

NEWARK, DE., September 14, 2018 /PRNewswire/ - Laurel Bridge Software, a provider of software solutions that enable healthcare providers to orchestrate their [medical imaging workflows](#), announces improvements to their [Exodus™ Migration and Consolidation Controller](#) that enhance the ability of healthcare providers to internally manage their own archive migration and consolidation requirements.

The latest updates to Exodus help ensure that clinician access to historical medical imaging information can be an integral part of any healthcare organization's enterprise imaging strategy that may be implemented using either of the following approaches:

- Self-managed through internal expertise.
- Service-provider-managed through Laurel Bridge expertise.

The following new capabilities make it easy for organizations to bring the necessary migration and consolidation expertise in-house:

- An easily configured graphical user interface.
- Improved migration status monitoring tools.
- Faster migrations by leveraging load balancing capabilities.
- Improved performance, in particular for study-based queries.
- Support for a Source-of-Truth migration approach.

In addition, the [Exodus - Migration and Consolidation Controller](#) can work in concert with [other Laurel Bridge software solutions](#), such as the [Compass™ - Routing Workflow Manager](#) and [Navigator™ - Imaging Retrieval Workflow Manager](#) to manage complex migrations and data orchestration requirements. This capability can be especially helpful for organizations that have recently merged or have been acquired.

Jeff Kelly, CIO at Nuvodia, a healthcare IT management services provider, states, "Using Exodus to bring our migration expertise in-house has enabled us to improve customer delivery and reduce costs. We are able to put our customers at ease because of the flexibility and robustness of the Laurel Bridge solutions."

"We empower your organization to help safeguard clinical access to legacy medical imaging data by giving you ownership of any associated data migration. You own the data!", says Mark Blair, President and CEO of Laurel Bridge Software. "Now you can fully own the migration and management of your data without external help."

About Laurel Bridge Software

Laurel Bridge Software provides enterprise imaging workflow solutions that solve complex, mission-critical imaging workflows that often arise when multiple business entities and their disparate clinical imaging systems must be unified. Our solutions reliably ensure new and historical DICOM imaging studies, HL7 messages, and non-DICOM objects are available to the clinical staff, at the point-of-care. Laurel Bridge's imaging workflow solutions are implemented at thousands of healthcare facilities, teleradiology service providers, and radiology group practices in more than 35 countries, both directly and through integration partners.
