

Enterprise Imaging Implementations Drive Growth at Laurel Bridge

Software helps health systems meet patient care delivery needs while driving down costs

NEWARK, Del., January 27, 2017 /PRNewswire/ -- Laurel Bridge Software, a provider of enterprise medical [imaging workflow solutions](#), experienced dramatic growth in 2016; major contributions came from health systems' merger and acquisition activity and their ensuing efforts to achieve their enterprise imaging goals by utilizing Laurel Bridge solutions. Last year Laurel Bridge Software solidified three new relationships with major imaging IT Original Equipment Manufacturers (OEMs), announced partnerships with Strategic Radiology and FINAO Solutions, and began working with more than eight new health-care provider organizations.

This growth was facilitated by Laurel Bridge's expanded enterprise imaging workflow capabilities that include:

- HL7 message routing
- Non-DICOM file transport
- Support for routing all DICOM message types
- DICOM load balancing with study persistence
- Nested rules processing
- Advanced TLS encryption
- DICOM SR data extraction and dictation system integration

Laurel Bridge's [Compass™ Routing and Workflow Manager](#) is now available in a scalable architecture that can serve the high throughput, disparate, and sophisticated workflow needs of the largest integrated health systems. Compass also can be integrated with other Laurel Bridge solutions, such as the [Navigator™ - Imaging Retrieval Workflow Manager](#) to solve very complex enterprise imaging workflow problems, such as retrieving and normalizing imaging studies from multiple facilities, PACS, or VNA systems.

See Laurel Bridge Software at the Feb. 19-23 [HIMSS 2017 Annual Conference and Exhibition \(Booth 8166\)](#). Laurel Bridge representatives will show healthcare IT leaders how they can easily implement and manage its scalable workflow layer to enhance interoperability among multiple PACS, VNA, and imaging IT environments.

About Laurel Bridge Software

Laurel Bridge Software provides enterprise imaging workflow solutions that solve complex, mission-critical imaging workflows that often arise when multiple business entities and their disparate clinical imaging systems must be unified. Our solutions reliably ensure new and historical DICOM imaging studies, HL7 messages, and non-DICOM objects are available to the clinical staff, at the point-of-care. Laurel Bridge's imaging workflow solutions have been implemented at thousands of healthcare facilities, teleradiology service providers, and radiology group practices in more than 35 countries, directly and through integration partners.
