**Enhanced Enterprise Workflow Capability Highlights
New Laurel Bridge Software Release**

*Helping healthcare organizations automate complex
enterprise imaging and reporting workflows*

NEWARK, Del., Sept. 30, 2015 /PRNewswire/ -- Laurel Bridge Software, a provider of enterprise medical imaging workflow solutions, announces the addition of HL7 workflow management, and 64 bit support to their [Compass™](#) DICOM routing solution. These new enterprise workflow capabilities will help healthcare organizations automate their increasingly sophisticated workflows that often span diverse healthcare IT systems, particularly when used in conjunction with the companies other workflow solutions.

The Compass image and HL7 workflow management solution from Laurel Bridge Software automates the ingestion and distribution of imaging studies and HL7 messages among disparate clinical imaging and archiving systems, delivering them at the right time, to the right location, regardless of organizational complexity. Compass can also ensure that imaging studies are identified and associated with the correct patient, originating location and study description to enable:

- Creation of site-specific workflows that span technology domains.
- Expedited workflow integration, PACS consolidation and VNA implementation.

Laurel Bridge is exhibiting at next week's [Philips Healthcare User Summit](#) and will have experts available to discuss your enterprise workflow challenges.

About Laurel Bridge Software

Complex, mission-critical imaging workflows can strain an organization's IT capabilities, particularly when multiple business entities and their disparate clinical imaging systems must be unified. Laurel Bridge Software provides enterprise imaging workflow solutions that reliably ensure new and historical DICOM imaging studies are available to the clinical staff, at the point of care. Our imaging workflow solutions have been implemented at thousands of healthcare facilities, teleradiology service providers and radiology group practices in 35 countries, across 4 continents, both directly and through integration partners.
