

Laurel Bridge Software Enters into Reseller Partnership with FINAO Solutions
Enhances FINAO Solutions Image Sharing and Managed Services Offering.

NEWARK, Del., Feb. 11, 2016 /PRNewswire/ -- Laurel Bridge Software, a provider of enterprise medical imaging workflow solutions, is pleased to announce a new reseller relationship with [FINAO Solutions](#) of Huntsville, AL. As a result of this relationship, FINAO Solutions has integrated the Compass DICOM and HL7 Routing Manager from Laurel Bridge into the FINAO Image Gateway, a core component of their managed services offering.

FINAO is a Value-Added Reseller (VAR) for many best of breed products and provides cost effective solutions and managed services in the radiology industry. The FINAO Image Gateway provides image sharing between connected imaging centers and hospitals. Facilities can easily transfer specified studies to any connected facility, greatly improving the ability to retrieve comparison studies, eliminate CD burning, and improve overall patient care. "The integration of Compass into our Image Gateway will be a seamless transition for our customers," notes Gene Cathey, CEO at FINAO Solutions. "The Compass DICOM and HL7 Routing Manager will enhance our ability to help customer's meet their complex clinical workflow needs, with the security and reliability they demand."

"We are pleased to be able to enhance the unique services offered by FINAO Solutions", says Mark Blair, President of Laurel Bridge Software. "We have put a lot of effort into ensuring that our [workflow solutions](#) make it easy for IT managers to control their increasingly complex medical imaging workflow scenarios. Despite the widespread use of the DICOM and HL7 standards, variability between study identification schemes and inconsistencies in the implementation of these standards can create significant workflow challenges that our solutions can help overcome."

About Laurel Bridge Software

Complex, mission-critical imaging workflows can strain an organization's IT capabilities, particularly when multiple business entities and their disparate clinical imaging systems must be unified. Laurel Bridge Software provides enterprise imaging workflow solutions, which reliably ensure new and historical DICOM imaging studies are available to the clinical staff, at the point of care. Laurel Bridge's imaging workflow solutions have been implemented at thousands of healthcare facilities, teleradiology service providers, and radiology group practices in more than 35 countries, across 4 continents, both directly and through integration partners.
